Program 6 : Order Database

Consider the following schema for Order Database:

SALESMAN (*Salesman_id, Name, City, Commission*)
CUSTOMER (*Customer_id, Cust_Name, City, Grade, Salesman_id*)
ORDERS (*Ord_No, Purchase_Amt, Ord_Date, Customer_id, Salesman_id*)
Write SQL queries to

1. Count the customers with grades above Bangalore's average.

2. Find the name and numbers of all salesmen who had more than one customer.

3. List all salesmen and indicate those who have and don't have customers in their cities (Use UNION operation.)

4. Create a view that finds the salesman who has the customer with the highest order of a day.

5. Demonstrate the DELETE operation by removing salesman with id 1000. All his orders must also be deleted.

create database Orderdb;

```sql
use Orderdb;

create table Salesman(
salesman_id int not null,
salesman_name varchar(20) not null,
city varchar(20) not null,
commission int not null,
primary key(salesman_id)
);

create table Customer(
customer_id int not null,
customer_name varchar(20) not null,
city varchar(20) not null,
grade int not null,
salesman_id int,
primary key(customer_id),
foreign key(salesman_id)references
Salesman(salesman_id) on delete set null
);

create table Orders(
order_id int not null,
purchase_amt int not null,
order_date date not null,
customer_id int not null,
salesman_id int,
```

```sql
primary key(order_id),
foreign key(customer_id)references
Customer(customer_id),
foreign key(salesman_id)references
Salesman(salesman_id) on delete set null
);

insert into Salesman
  values(1000,'John','Bangalore',25),
  (2000,'Ravi','Bangalore',20),
  (3000,'Kumar','Mysore',15),
  (4000,'Smith','Delhi',30),
  (5000,'Harsha','Hyderabad',15);

  insert into Customer
  values(10,'Preethi','Bangalore',100,1000),
  (11,'Vivek','Mangalore' ,300,1000),
  (12,'Bhaskar','Chennai',400,2000),
  (13,'Chethan','Bangalore',200,2000),
  (14,'Mamatha','Bangalore',400,3000);

  insert into Orders
  values(50,5000,'2017-05-04',10,1000),
  (51,450,'2017-01-20',10,2000),
  (52,1000,'2017-02-24',13,2000),
  (53,3500,'2017-04-13',14,3000),
  (54,550,'2017-03-09',12,2000);
```
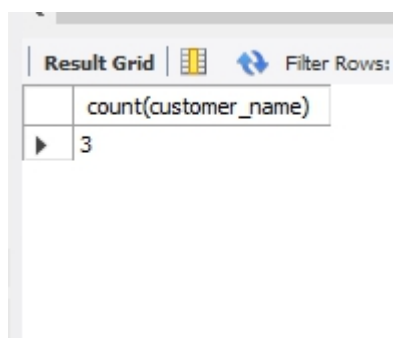

----- Count the customers with grades above Bangalore's average.

select count(customer_name)from Customer
where grade> (Select avg(grade) from Customer
where city ='Bangalore');

count(customer_name)
3

------- Find the name and numbers of all salesmen who had more than one customer.

select distinct c.salesman_id,s.salesman_name
from Customer c,Salesman s
  where c.salesman_id=s.salesman_id
  and 1<(select count(customer_id) from Customer
where salesman_id=c.salesman_id);

salesman_id	salesman_name
2000	Ravi

------ List all salesmen and indicate those who have and don't have customers in their cities (Use UNION operation.)

```
  select s.salesman_name,c.customer_name from
Salesman s,Customer c
  where s.salesman_id=c.salesman_id and c.city=s.city
  union
  select s.salesman_name,'No Match' from Salesman
s,Customer c
  where s.salesman_id = c.salesman_id and c.city!=s.city;
```

Result Grid	Filter Rows:	
	salesman_name	customer_name

Program 7 : Book Database

BOOK (Book_id, Title, Publisher_Name, Pub_Year)
BOOK_AUTHORS (Book_id, Author_Name)
PUBLISHER (Name, Address, Phone)
BOOK_COPIES (Book_id, Branch_id, No-of_Copies)
BOOK_LENDING (Book_id, Branch_id, Card_No, Date_Out, Due_Date)
LIBRARY_BRANCH (Branch_id, Branch_Name, Address)

Write SQL queries to

1. Retrieve details of all books in the library – id, title, name of publisher, authors, number of copies in each branch, etc.
2. Get the particulars of borrowers who have borrowed more than 3 books, but from Jan 2017 to Jun 2017
3. Delete a book in BOOK table. Update the contents of other tables to reflect this data manipulation operation.
4. Partition the BOOK table based on year of publication. Demonstrate its working with a simple query.
5. Create a view of all books and its number of copies that are currently available in the Library.

```
create database bookdb;
use bookdb;

 create table publisher(
 name varchar(30) not null,
 address varchar(20) ,
 phone varchar(10),
 primary key(name)
 );
```

```sql
create table book(
book_id int not null,
title varchar(20),
publisher_name varchar(20),
pub_year varchar(20),
primary key(book_id),
foreign key(publisher_name) references
publisher(name)
);

create table book_authors(
book_id int not null,
author_name varchar(30) not null,
primary key(book_id,author_name),
foreign key(book_id) references book(book_id)
);

create table library_branch(
branch_id int not null,
address varchar(20),
branch_name varchar(20),
primary key(branch_id)
);

create table book_copies(
book_id int not null,
branch_id int not null,
no_of_copies int,
```

```sql

Program 8:Student Enrolment Database

Consider the following database of student enrollment in courses & books adopted for each course.

STUDENT (regno: string, name: string, major: string, bdate:date)

COURSE (course #:int, cname:string, dept:string)

ENROLL (regno:string, course#:int, sem:int, marks:int)

BOOK _ ADOPTION (course# :int, sem:int, book-ISBN:int)

TEXT (book-ISBN:int, book-title:string, publisher:string, author:string)

i. Create the above tables by properly specifying the primary keys and the foreign keys.

ii. Enter at least five tuples for each relation.

iii. Demonstrate how you add a new text book to the database and make this book be adopted by some department.

iv. Produce a list of text books (include Course #, Book-ISBN, Book-title) in the alphabetical order for courses offered by the 'CS' department that use more than two books.

v. List any department that has all its adopted books published by a specific publisher.

vi. Generate suitable reports.

vii. Create suitable front end for querying and displaying the results.

```sql
CREATE DATABASE COLLEGE;
USE COLLEGE;

CREATE TABLE student(
        regno VARCHAR(15),
        sname VARCHAR(20),
        major VARCHAR(20),
        bdate DATE,
        PRIMARY KEY (regno)
        );

CREATE TABLE course(
        courseno INT,

Program 10:College Database

Consider the schema for College Database:

STUDENT (*USN, SName, Address, Phone, Gender*)
SEMSEC (*SSID, Sem, Sec*)
CLASS (*USN, SSID*)
SUBJECT (*Subcode, Title, Sem, Credits*)
IAMARKS (*USN, Subcode, SSID, Test1, Test2, Test3, FinalIA*)
Write SQL queries to

1. List all the student details studying in fourth semester 'C' section.
2. Compute the total number of male and female students in each semester and in each section.
3. Create a view of Test1 marks of student USN '1BI15CS101' in all subjects.
4. Categorize students based on the following criterion:

If FinalIA = 17 to 20 then CAT = 'Outstanding'
If FinalIA = 12 to 16 then CAT = 'Average'
If FinalIA< 12 then CAT = 'Weak'
Give these details only for 8th semester A, B, and C section students.
